

HotSchedules Workforce is an intuitive on-demand restaurant scheduling and labor management software solution designed for small to medium-sized restaurant chains. Workforce edition can be fully integrated with most major point of sale and time and attendance systems.

“Our employees were constantly struggling to keep track of their schedules from week to week – jotting them down on scratch paper, calling in to the restaurant to ask busy managers and staff for their schedules, or making a dozen phone calls just to get one shift covered,” says Vicheinrut. “Additionally, the management staff was not able to adequately communicate with each other or make consistent shift notes with the existing manager red book. Entries were not thorough enough, and it was more difficult to follow-up on previous entries and keep appropriate records and feedback on employees.”

Dianne Vicheinrut
GM Hula Grill Waikiki (approx. 135 employees)

- Full-service support

Workforce provides a fully integrated and powerful on-demand labor management solution, without the complexity and cost typically associated with other workforce management solutions. To help your managers create more cost effective schedules, HotSchedules Workforce includes a variety of features and built-in reports that analyze where additional savings can be found. With advanced reporting features such as an automated Labor Proforma, Overtime Warning Report, Staff Schedule Chart, Staff Volume Chart and Forecasting Reports, managers can pinpoint exactly when labor costs are within budget to avoid costly scheduling errors.

HotSchedules Workforce includes comprehensive labor forecasting tools and integration with all major POS systems. Our POS integration utility, HS Connect, synchronizes point of sale data with the HotSchedules reporting engine to give managers powerful comparison reports. HS Connect also includes advanced features such as importing the online schedules into your time and attendance system, enabling enforced clock-in/out.
